Dave,

Got your email. Basement walls look much better. Due to the extreme amount of water Friday, I am noting in your file. Castleview is still a work in progress.

Thanks and take care Michele

Hi Michele

wanted to let you know the siding was fixed again, looks good, hope it stays put this time..

The basement looks better, still water though, see pictures attached.

front/top basement wall - not as bad, still water coming in (see pix)

corner of basement by washer/dryer - water has come in here before, definately a lot more this time (see pix)

water meter area - used to be just a little, I know it rained a lot and

there was a lot more coming in (see pix)

I was told to ask you about a top or upper french drain that opens to

the
sunlight? Chris sister is an architect and she said from the look of things

this probably won't go away and she suggested this. Also I don't think
they
finish the front yet and they might still be sealing things up. The
chaulking that Doug put down to cover the big gap under our front threshold

is all cracked. Not sure if the guys picked this up to patch underneath
it
when they were fixing this or what?

Thanks and we'll talk soon
